SHARED MEMORY QUESTION

How should the record of prior encounters reach the next employee, without a query, and without asking the customer to repeat context?

1 Framing.

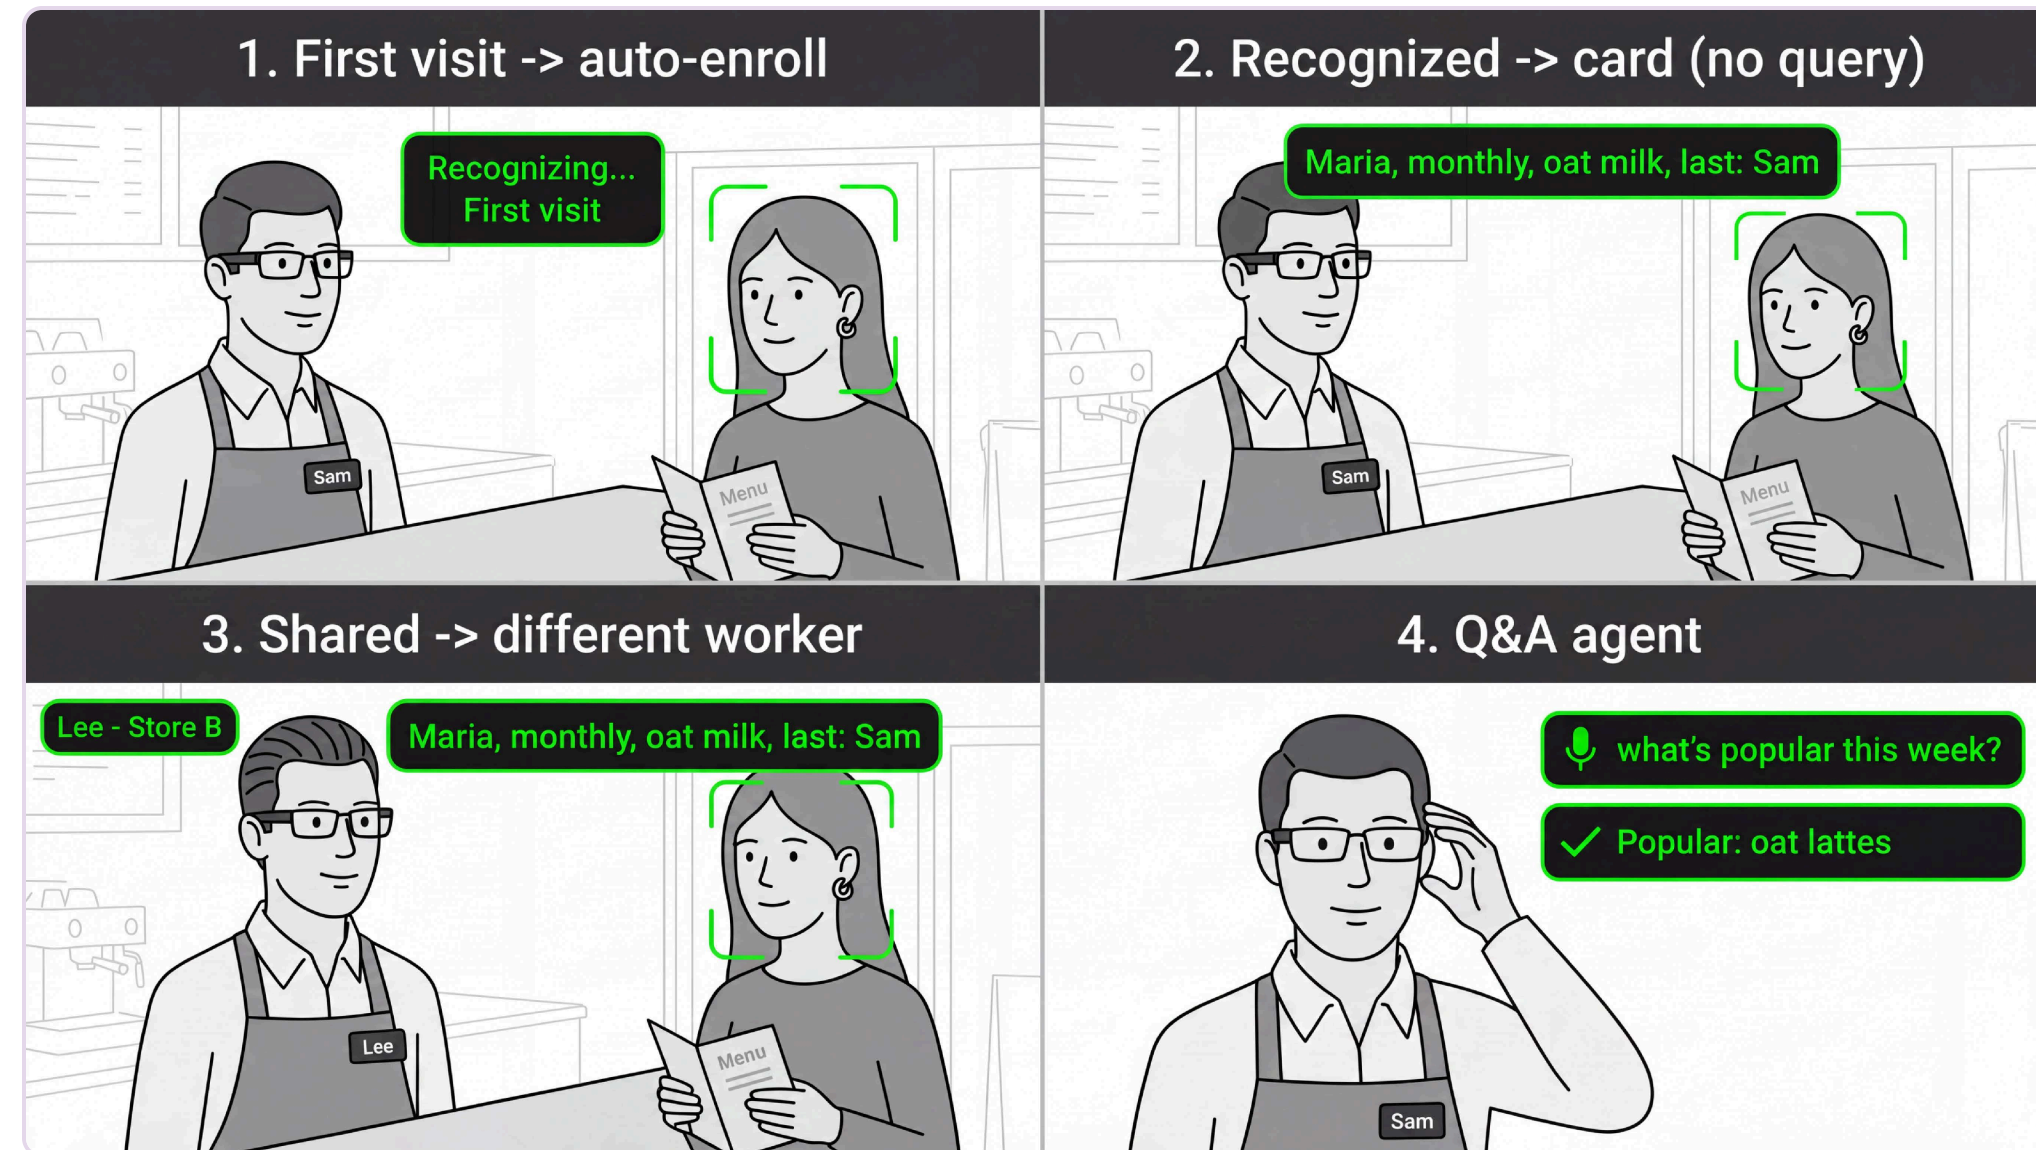

Consumer glasses, already issued for task support, as a platform for organizational memory.

2 Prototype.

End-to-end on Rokid glasses and a laptop server; strict I/O-compute split, open source.

3 Framework.

Memory keyed to identity, cumulative per customer, queryable by a tool-using agent.

Implementation: strict I/O-compute split, no paired phone, no vendor SDK. Research prototype, evaluated at small scale; a user study and in-store evaluation are future work.
